- Appendix 1: The Five Capitals Model 32

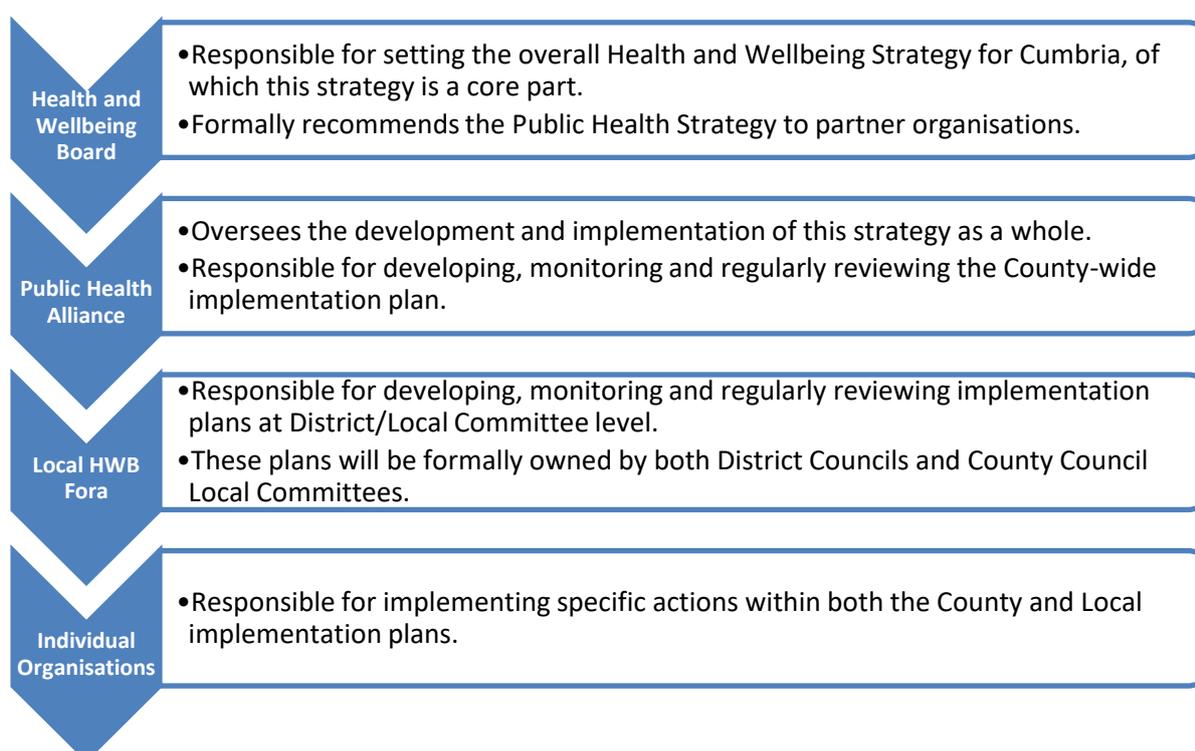

Cumbria Joint Public Health Strategy: Tackling the Wider Determinants of Health and Wellbeing

Introduction

This strategy has been developed by the Cumbria Public Health Alliance, which includes partners from across local government, the health service and the third sector. It describes the shared ambition of these partners to help bring about the environmental, social and economic conditions that can best support Cumbrian residents to enjoy a healthy and happy life.

The aims outlined in this document are very ambitious, and achieving them is not simply a matter for the partners who have signed up to the strategy. Many of the key themes are influenced significantly by national and even international economic and political forces, and by the action of individuals as well as a wide range of private sector organisations, so there is no guarantee that the aims set out in this document can be achieved. The strategy therefore reflects the aspirations of partners and a commitment to work towards these over the long term, and to encourage others to work towards them, within the constraints that all agencies face.

Moving towards achieving these aspirations will take concerted action at many levels, including work to influence national policy. Some of this action will need to be taken at the level of the whole County, while other work will take place at a more local level: much of the implementation of the strategy depends on the work of District Councils. Consequently this strategy will be supported by a range of action plans, developed and implemented at different levels, as follows:

Key to the implementation of this strategy will be the development of mechanisms for working together and for assessing how decisions that are being made influence the aims set out in this strategy. Some of these mechanisms, such as the Public Health Alliance and the Local Health and Wellbeing Fora, are in place already but will be refreshed to enable them to develop local action in support of the strategy.

In setting all the aims within this strategy, all partners recognise that there are significant constraints currently facing us. These include the powers available to local organisations, and significantly challenged budgets particularly within local government and the NHS, with knock-on impacts on the third sector. Achieving these aims in this environment will be extremely challenging, but our commitment as partners to this strategy is to make the best use of the limited powers and resources available to work towards these aims.

Strategic Context

The Cumbria Health and Wellbeing Strategy 2019-29 sets as its overarching vision: ***[Drafting Note: to be confirmed following consultation on that strategy]***

“To enable Cumbrian communities to be healthy and to tackle health inequalities”

The factors that impact on people’s health and wellbeing are many and varied, and the strategies that are used to improve health and wellbeing therefore also need to be diverse and to address a number of different influences. Recognising this, the Health and Wellbeing Strategy identifies four key themes: ***[DN: to be confirmed following consultation on that strategy]***

- Protecting the health of the population as a whole
- Improving health and wellbeing throughout the lifecourse
- Tackling the wider determinants of health and wellbeing
- Providing high quality, person-centred care.

Obviously public health is ultimately about people; however public health action does not just focus on individuals, but on social, economic, environmental and structural issues, as these have direct and indirect impacts on health and wellbeing. Consequently the overall public health approach for Cumbria can be seen as having three main strands, connected to three of the four key themes of the Health and Wellbeing Strategy.

Health protection remains a core part of the public health agenda and like all parts of public health has a significant multi-agency dimension. Screening and immunisations are commissioned by NHS England and delivered by local health services; communicable disease control involves significant joint efforts by the County Council public health team, District environmental health departments and Public Health England, among many others; and Emergency Planning and resilience is co-ordinated through the multi-agency Local Resilience Forum.

Over recent years, much public health activity has had an individual focus. The **life course approach** (starting well, developing well, living well, ageing well and dying well) is being used as a core component of the health and wellbeing frameworks for the two emerging Integrated Health and Care Partnerships in West, North and East Cumbria and Morecambe Bay. Action that focuses on working with individuals, for example in supporting them to stop smoking, eating a more healthy diet, reducing alcohol consumption and being more

physically active, as well as individual support for mental wellbeing, is more fully outlined in these health and wellbeing frameworks.

However public health action is also required at a broader social, environmental and economic level. Variation in access to or quality of the **wider determinants** of health and wellbeing is the single biggest driver of health inequalities and influences an individual's health behaviour.

It is the third of these strands, creating the conditions in which individuals can have opportunities to be healthy and to take action in support of their own health and wellbeing, that is the focus of this strategy. In line with the timeframes for the Health and Wellbeing Strategy, this strategy covers the period 2019 – 2029.

Clearly these three main strands of work have inter-connections and overlaps; this is not a neat division. In particular, the wider determinants shape individual behaviour: diet, for example, is influenced both by individual factors such as attitudes and knowledge, and by social factors such as food availability, marketing and culture. This strategy therefore cannot stand alone as the way of improving health and wellbeing in Cumbria, but has to be seen alongside other plans that focus on working with individuals to influence mindsets and behaviours, as illustrated in Figure 1 overleaf.

Model of the determinants of health and wellbeing

This strategy is adapted from the “five capitals” model proposed by Forum for the Future as a framework for sustainable systems (see Appendix 1). Interpreted for the purposes of a public health strategy, this model suggests that a community is healthy and sustainable when it has:

Natural assets: A high quality natural environment that provides opportunities for engagement with the natural world.

Human assets: People with the skills, knowledge, and experience that give them the capacity to take part in society and have meaningful and fulfilling lives.

Social assets: A good social infrastructure, with networks and institutions that allow people to connect to each other.

Physical assets: A good physical infrastructure including housing, transport, and a commercial environment that promotes healthy behaviours.

Financial assets: Adequate financial resources that are fairly distributed.

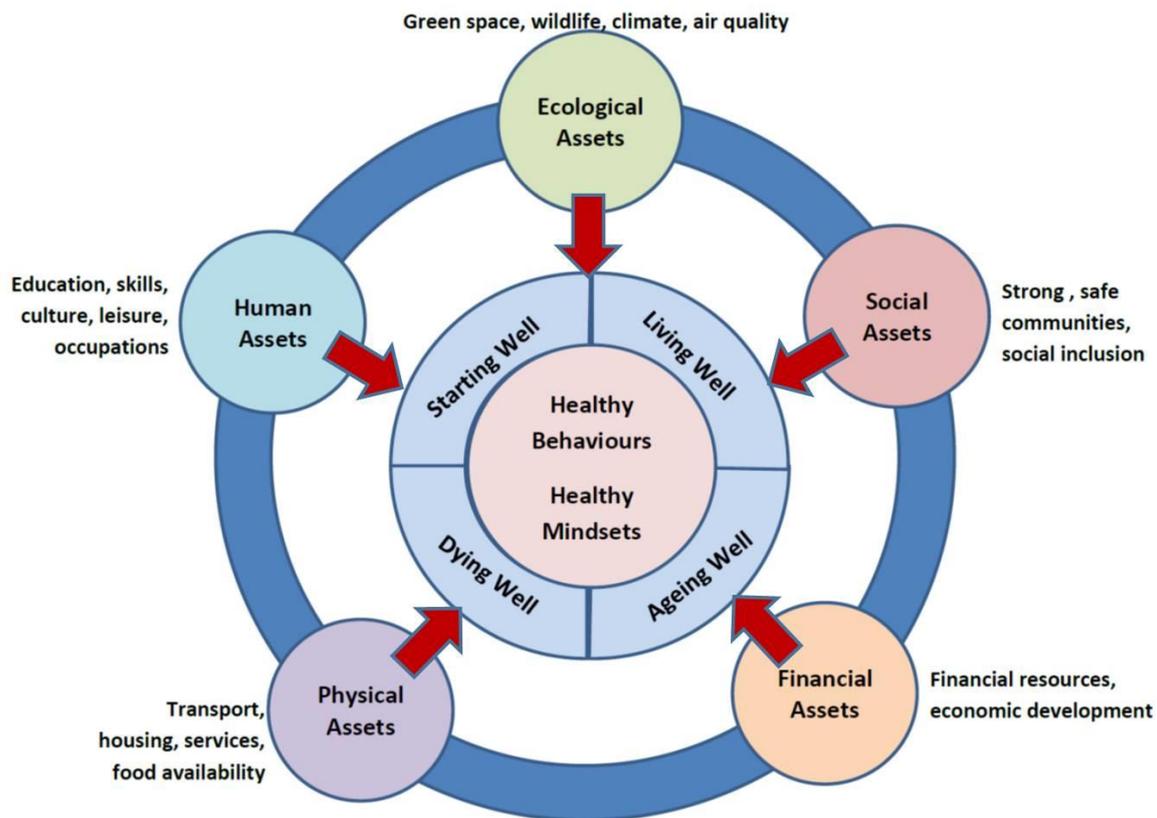

Figure 1: Determinants of Health and Wellbeing

A key feature of this model is that it emphasises the importance of building all five types of community assets without degrading any of them. It therefore sets a positive vision of building a better society in which everyone is able to maximise their potential for health and wellbeing.

This can however be challenging in reality, as often there are actual or perceived competing demands. In particular, the requirement for increased housing or business infrastructure can compete with the desire to protect natural assets. So too can economic growth, which relies on all the other assets but can damage them if not thoughtfully and carefully pursued. This strategy therefore commits policy and decision makers to consider all these factors in the round when assessing proposals for action.

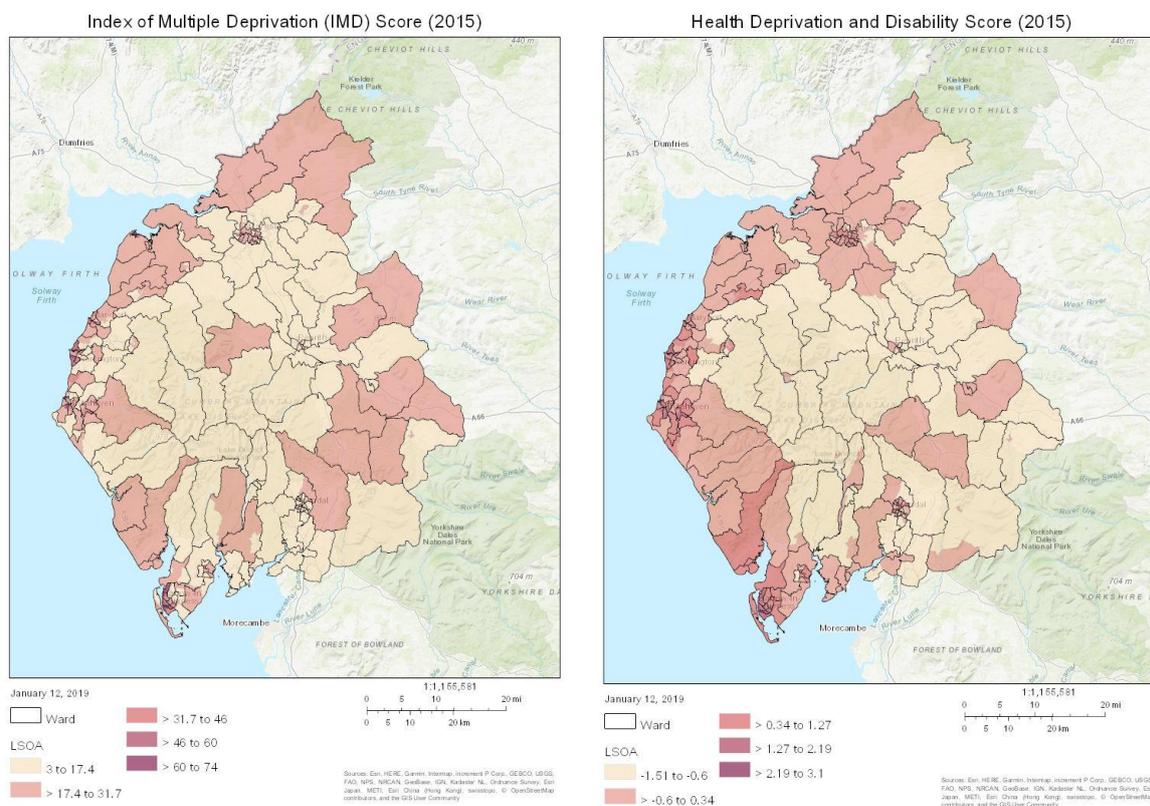

Key Commitment

We will ensure that our decision making takes full account of the environmental, social, human, physical and financial assets described in this strategy. We will endeavour to ensure that our decisions and actions grow these assets sustainably, and where that is not possible, we will attempt to offset any negative impact through action elsewhere, for the health and wellbeing of all Cumbria's communities.

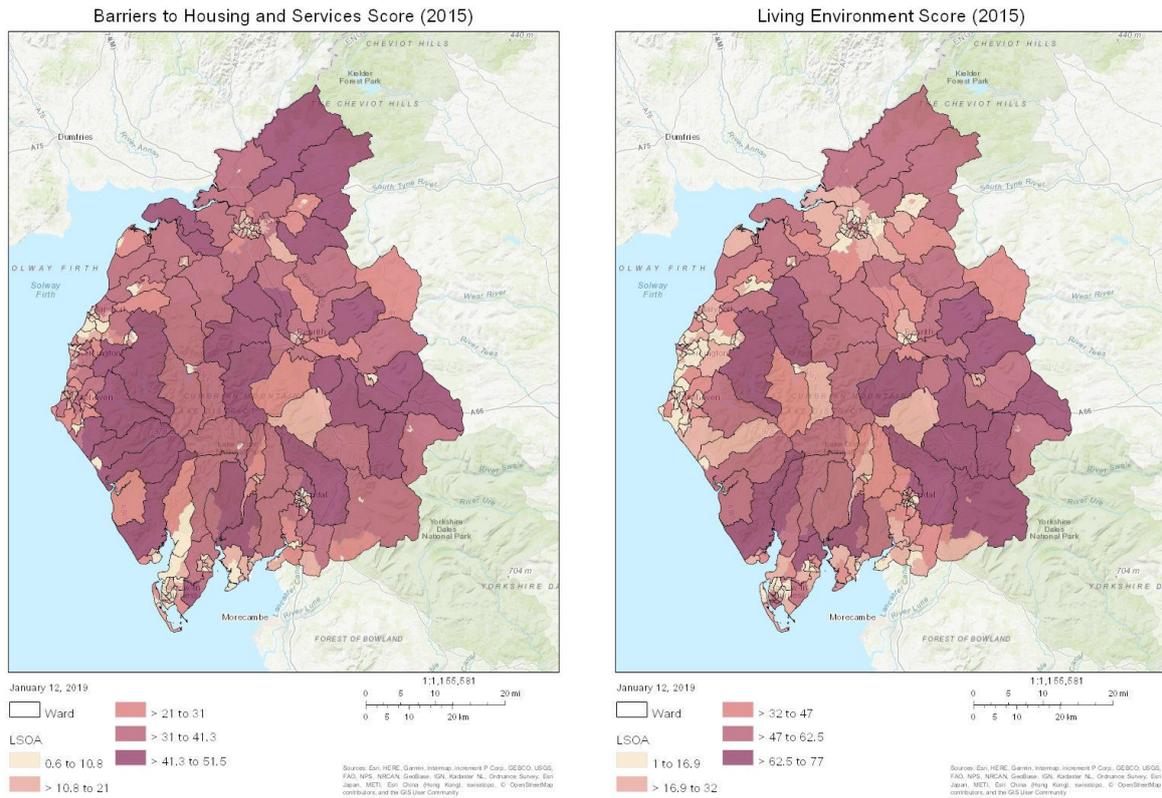

The Current Position

Clearly these various assets are not evenly distributed throughout our County. Many parts of Cumbria have a natural environment second to none; however some of our urban areas suffer from poor air quality. There are clear pockets of deprivation linked to low income and skills, particularly in some urban areas, whereas it is often our more rural areas that have difficulty accessing goods and services. Such differences in poverty, power and resources, exposure to health damaging environments, and opportunities in early life are the main drivers of health inequalities. Unhealthy behaviour such as smoking, inactivity, violence and poor diet is more common in communities that have less access to and control over these assets.

The correlation between deprivation and health can clearly be illustrated by comparing the geography of multiple deprivation in Cumbria with the geography of health deprivation and disability, as shown in the maps below.

It is clear from the maps above that for many of the indicators that combine to create the Index of Multiple Deprivation (particularly those focused on income, employment and skills), Cumbria's most challenged areas are urban and more generally along the west coast of the county. However there are two important caveats to this statement. Firstly, the Index of Multiple Deprivation is more useful in looking at urban areas, where deprivation is more likely to be similar in any given location; in larger rural geographies there is more likely to be a mixture of relative deprivation and relative affluence leading to a more average score overall and potentially masking rural deprivation. Secondly, some of the indicators used tell a very different story: the maps below illustrate that for access to housing and services, and for the living environment domain (which is dominated by indicators of housing quality including whether houses are centrally heated), it is Cumbria's rural areas that face the greatest challenges.

This significant variation across Cumbria indicates that the priorities for tackling the wider determinants of poor health and wellbeing will necessarily be different in different parts of the county. While there are some actions that can and should be taken at a county-wide level, it will be particularly important to identify priorities and actions within the overall framework of this strategy at a District and even more local community level.

Vision for a Healthier Cumbria

Building on the five capitals and taking inspiration from the World Health Organization's Healthy Cities model, the future for a healthier Cumbria can be seen as having five key components:

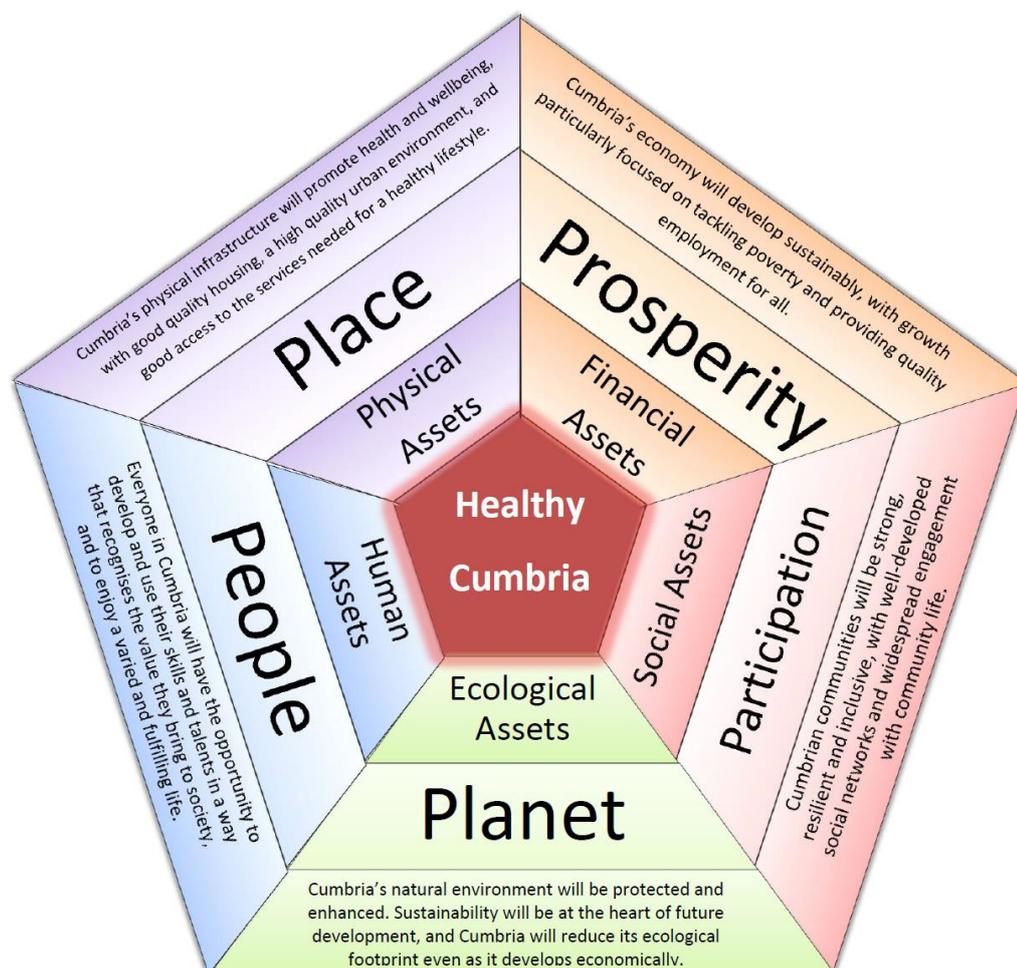

Planet: Cumbria's natural environment, from our world-class landscapes to the centre of our towns, will be protected and enhanced. Sustainability will be at the heart of future development and Cumbria will reduce its ecological footprint even as it develops economically.

People: Everyone in Cumbria will have the opportunity to develop and use their skills and talents in a way that recognises the value they bring to society and to enjoy a varied and fulfilling life.

Participation: Cumbrian communities will be strong, resilient and inclusive, with well-developed social networks and widespread engagement with community life.

Place: Cumbria's physical infrastructure will promote health and wellbeing, with good quality housing, a high quality urban environment and good access to the services needed for a healthy lifestyle.

Prosperity: Cumbria's economy will develop sustainably, with growth particularly focused on tackling poverty and providing quality employment for all.

Planet: Growing our Natural Assets

The global ecosystem is not just the environment in which we live: it is the basis of our society and our economy. A range of natural resources such as land, water, air, timber and animals, and natural processes such as the water cycle and climate regulation, influence our health. But they have to be utilised sustainably in order to ensure that people can have a good quality of life today and to avoid damaging the prospects of future generations.

In the context of this public health strategy, the key aspects of our natural resources that need to be addressed are as follows:

- **Improving the quality of and access to green space**
- **Promoting biodiversity and wildlife habitats**
- **Climate change**
- **Air quality**
- **Waste reduction**

Improving the quality of and access to green space

Cumbria has a plethora of diverse green and blue spaces, from rugged high open fells, rolling farmland, woodland, coastal plains and beaches, with a variety of village, town and city parks, recreation grounds, community gardens, cemeteries and churchyards. These spaces play a vital role in the in the health and wellbeing of local communities and provide valuable ecosystem services such as food, fuel and flood management.

Green and blue space has many public health benefits. Often free to access, it promotes physical activity through providing a pleasant environment for walking, running, cycling and recreational activities, improving health and mental wellbeing. Urban green spaces provide pleasant areas to relax and socialise, promoting greater levels of social activity and stronger neighbourhood relationships. This can help in combatting isolation and loneliness. Spending time in green spaces has been shown to produce levels and patterns of chemicals in the brain associated with low stress and positive impacts on blood pressure.

Although Cumbria is rich in green and blue space it is vital to maintain and where necessary improve its quality, its distribution and access to it. Currently, some people are disadvantaged in terms of the benefits they can derive from it, either through financial circumstances, the area they live in or access to transport.

Key Aim

To protect and enhance Cumbria's green and blue spaces, ensuring that everyone in the County has good access to a high quality natural environment.

Promoting biodiversity and wildlife habitats

There is an increasing amount of evidence that connections with nature and other forms of life can have a significant beneficial impact on health and wellbeing. Consequently it is important for public health to plan positively for the creation, protection and enhancement of biodiversity and wildlife habitats.

We need to develop the core of a county-wide Nature Recovery Network, so we can plan for and encourage wildlife and habitats back into our towns, countryside and coastline through initiatives such as wildlife-friendly gardens, green roofs, tree planting, species-rich roadside verges and marine protection. This will enable habitats to spread, wildlife to flourish and increase the number of people who can benefit.

One of the key areas for promoting and safeguarding biodiversity and wildlife habitats will be through engagement with the next generation of young people and children. Cumbria will continue to develop its work with a wide spectrum of conservation and farming groups and the health sector to provide support for schools and community groups to make it easier to learn outdoors and to visit natural places through awards and initiatives run by those such as the John Muir Trust and Forest Schools.

Key Aim

To promote Cumbria's biodiversity through protection and enhancement of a wide variety of wildlife habitats.

Tackling climate change

Climate change is already a threat to Cumbria, and in the long term is one of the greatest threats to public health globally. Within Cumbria, climate change is likely to have a range of impacts. We can expect to see wetter winters, hotter, drier summers, rising sea levels and a greater likelihood of extreme weather events. The severe floods of 2005, 2009 and Storm Desmond in 2015 were consistent with predictions for climate change and caused significant disruption and damage. In 2010, the north west experienced its driest January to June since 1929, resulting in low reservoir levels and hosepipe bans across north west England, affecting six million consumers. These extreme weather events can present an immediate threat to life, property and health and can also have a long term physical, emotional and financial impact on lives, with significant health consequences.

Obviously Cumbria cannot tackle climate change alone – this is a global problem. However it is important for us to take action locally both to reduce our contribution to the problem and to mitigate the inevitable impacts. In 2010 the Lake District National Park was one of the first areas to set itself a local carbon budget and to monitor annual reductions – something that could be valuably adopted in the whole of Cumbria. The 2018 report of the International Panel on Climate Change recommended that in order to limit global climate change to 1.5°C the world should reduce net carbon emissions by 45% by 2030 and be carbon neutral by 2050. There is no reason why Cumbria should be exempt from timescales of this sort – and indeed why we should not seek to go further, faster.

The health of Cumbria's green space and its associated biodiversity and wildlife habitats will help to build resilience to counter the extreme weather associated with climate change. There is an opportunity to do more on green and blue space infrastructure through the local planning system, including providing urban cooling, local flood risk management, carbon sequestration and local access to shady outdoor space through planting more trees.

Key Aim

To become a "carbon neutral" County and to mitigate the likely impact of existing climate change.

Air quality

The impact on health of poor air quality can be significant and goes beyond respiratory health. People who live in poorer areas are often exposed to higher levels of air pollution and may suffer greater negative impacts. As a mainly rural county, Cumbria is generally favoured with very good air quality: the proportion of mortality attributable to particulate matter air pollution in Cumbria is 3.82%, lower than the national figure of 4.72%. Only Carlisle and South Lakeland have declared any Air Quality Management Areas (AQMAs). These are places where national air quality objectives are not likely to be achieved. Those in Cumbria have all been declared as a consequence of raised levels of nitrogen dioxide (NO₂), primarily due to emissions from road transport.

However, several other areas in Cumbria have levels of air pollution approaching threshold levels and there are concerns that levels may be rising, with the popularity of biomass boilers, wood-burning stoves and solid fuel use in rural, off-grid areas. For PM_{2.5} (particulate of less than 2.5 microns) in particular, there is no safe level and it has been estimated that in 2010 the deaths of 195 people in Cumbria were attributable to PM_{2.5}.

Action to address the causes and mitigate the consequences of air pollution needs to be taken at all levels of society from Government through to the individual, and these actions will vary depending on the most important influences over air quality at a local level. There is often a tension between a desire for good air quality and economic development objectives, which can also improve health. Major new housing projects, industrial and commercial developments and roads can all impact on air quality either through direct emissions or through increasing traffic levels.

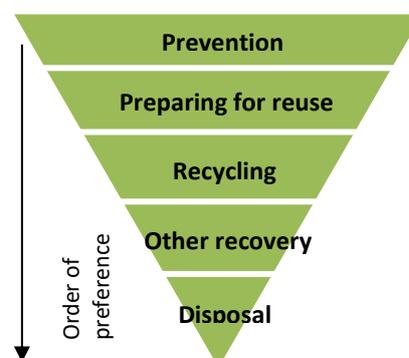

Improving air quality requires both large systemic changes to reduce industrial emissions and traffic and to encourage the use of less polluting vehicles, and action at community level to change behaviours. Where local people have been part of decisions made about interventions, they are more likely to be engaged and thus change their behaviour. Communities that better understand air pollution can become powerful advocates for action and improvement in their local area.

Key Aim

To improve air quality in Cumbria through action on transport, industrial, agricultural and domestic emissions.

Waste reduction

Cumbrians produce almost 250,000 tonnes of rubbish every year. Reducing the amount of waste generated not only reduces the environmental impact and financial burden to local authorities, but often leads to increased household disposable income, healthier dietary habits and improved well-being. Cumbria generates 50,000 tonnes of garden waste, much of which could be composted at home, encouraging physical activity and fresh air. An equivalent of £50 of food is thrown away per household each month. Better portion planning can reduce waste and reduce grocery bills, freeing up money to spend on activities that promote health and well-being.

Key Aim

To reduce the amount of waste produced in Cumbria through reduced material use, promoting greater product re-use, and improving recycling rates.

People: Nurturing our Human Assets

The assets within our communities relate to the people's skills, knowledge and experience the things they draw on every day in living and contributing to society. This includes their capacity for things like empathy, passion and joy and also their intellectual output such as art and other cultural expressions. We can nurture our human assets by:

- **Promoting education, skills and lifelong learning**
- **Ensuring meaningful and high quality occupations for all**
- **Ensuring access to adequate leisure opportunities**
- **Promoting engagement with arts and culture**
- **Tackling discrimination and exploitation**

Promoting education, skills and lifelong learning

There is a direct correlation between the areas of the County with the lowest educational attainment and skills levels, unemployment and poor health. Supporting people to access employment through action to improve skills is therefore a critical part of this strategy. In addition, lifelong learning has health benefits that go beyond the impact on employment: learning for its own sake is positive for mental wellbeing.

Improving the skills of the population to enable employers and the economy to access the workforce they require, both through education and through adult skills training and re-skilling, will be a critical part of the people strand of the Local Industrial Strategy (LIS), but will also play a major part in the other strands.

Cumbria faces a number of challenges in this area:

- There is a small pool of residents with graduate level qualifications, who are spread across separate labour markets;
- The percent of population with no qualifications, at 15.3% is higher than the national average, with areas of the coastal belt as high as 17.6%;
- Very strong apprenticeship performance, however there are emerging challenges in maintaining this, mirroring the national reduction in starts.

In developing the skills aspect of the Local Industrial Strategy, the Local Enterprise Partnership (LEP) has developed a series of sector skills plans outlining the skills challenges and shared areas for development in: Advanced Manufacturing; Nuclear; Health and Care; Construction; Logistics; Visitor Economy; Rural; Professional Services; Cultural and Creative Industries. The LEP has now established with partners a Careers Strategy for Cumbria that will drive improvements in education and business links, enthusing our young people about the opportunities available in Cumbria and enhancing examples of high quality partnership work between employers and education institutions. This approach will ensure that young people are encouraged to aspire from an early age and have a clear view of the careers available to them, so that they can plan their education accordingly. This approach when tested elsewhere delivered a significant improvement in attainment.

Work will be undertaken with education and training partners to develop an extended curriculum that both meets the needs of industry and the needs of residents, ensuring that there is choice available and a range of support to ensure that those who find accessing skills provision difficult are able to do so, securing the inclusive growth aspiration within the LIS.

Key Aim

To reduce disparities in educational attainment and to increase the proportion of the workforce with higher level skills and qualifications.

Ensuring meaningful and high quality occupations for all

An occupation that gives life a sense of purpose and value is an essential part of positive wellbeing. For many people this will of course come in the form of employment, which also brings the economic resources necessary for good health. However other forms of occupation, such as volunteering or bringing up a family, can be just as powerful for improved wellbeing and should not be ignored as a way of bringing this purpose and value to life.

In general, having a job is better for health than not having one, but poor quality jobs can be damaging to health. High quality employment will provide people with security, a good sense of job control and a reasonable balance between the effort they have to put in and the reward (financial or otherwise) that they get in return. Where these factors are not present, health is more likely to suffer.

It is recognised that currently not everybody is benefitting from Cumbria's economic prosperity with the wealthiest parts of the county not being those with the highest earnings and those areas with the highest weekly earnings experience higher rates of unemployment, deprivation, low skills and poor health. Equally, there is a gap in high quality, flexible/part time jobs that allow people to transition back into work around bringing up a family, or other caring responsibilities.

The Local Industrial Strategy has therefore identified the need to tackle worklessness and under employment with a more coherent employability and social cohesion offer. This will be a co-ordinated multi-agency programme delivered at a local and potentially community-level, based on experiences gained in tackling inter-generational worklessness in other areas. This approach could bring around 4,500 people back into the workforce, helping to address labour supply issues and improve people's quality of life and wellbeing.

Key Aim

To ensure that everyone in Cumbria has the opportunity for high quality employment or other meaningful activity as part of their daily life.

Ensuring access to adequate leisure opportunities

People's leisure helps shape their mental and physical health. The health benefits include opportunities to be active, through sport and other physical activities, but also to be creative and to engage with friends, which can promote mental well-being. Not only are hobbies fun, but they can refresh the mind and body and assist one in improving self-esteem, staying healthy, active and happy. Taking part in leisure activities as a family is also beneficial for children because the process helps to model healthy ways to handle stress and emotions. Participating in leisure activities regularly reduces depression: in fact, just thinking about past outdoor recreation experiences can often improve one's mood.

Leisure is often referred to as "free time", because leisure time is free from compulsory activities such as employment, running a business, household chores, education and other such day-to-day activities. People need both enough time for leisure and access to a range of leisure opportunities,

whether formal or informal. Leisure provides people with the chance to find balance in their life, it also puts them in control of how they spend their time. People on low incomes are likely to have less control over their free time, have less access to recreational space and have less disposable income to spend on leisure.

Key Aim

To ensure that all communities in Cumbria have good access to a wide range of leisure opportunities, including promoting improved availability and affordability of leisure options.

Promoting engagement with arts and culture

It is widely recognised that experiencing arts and culture can create a sense of wellbeing and transform quality of life for individuals and communities. The report *Creative Health: the Arts for Health and Wellbeing*, prepared by The All Party Parliamentary Group (APPG) for arts, health and wellbeing, details various ways in which the arts can enable people to enjoy better health and quality of life. It sets out the significant contribution that arts and culture can make to keeping people and communities healthy and happy: that arts engagement can improve mental health, help with the management of long term health conditions, promote healthy ageing, tackle health inequalities and begin to address obesity. It makes a powerful case for the arts and culture to contribute to the wider health and social care agenda helping people to live healthier lives.

Cumbria has a rich, diverse cultural and arts offer: a 'cultural landscape' shaped by the area and its arts and cultural heritage. People take part in everyday creativity like music, drawing, painting, film making, photography, pottery, singing and crafts. Many attend cultural events in community spaces, theatres, galleries, heritage sites, libraries, museums, venues, at outdoor locations and in our world heritage sited and spectacular landscapes. However it is recognised there are inequalities in the level of cultural and arts engagement and participation across Cumbria. For some residents access to the arts is limited by age, transport, rurality, disability or low income. Our ambition is for Cumbria to be a county that is recognised for the part played in making the arts and culture central to the health and wellbeing of its communities, and to promote awareness of the range and quality of opportunities that exist for people to be creative, to participate and enjoy the arts and culture.

Key Aim

To encourage a wide range of high quality opportunities to participate in and engage with the arts and culture, and to enable great art and culture for everyone so that participation and engagement in the arts is not dependent on where people live or their social, educational or financial circumstances.

Tackling discrimination and exploitation

Discrimination is when a person is treated worse than another person on account of an aspect of their identity. Discrimination can take place at work, in the community, when travelling, when accessing public services, or as a consumer. Groups with a history of discrimination will often be disproportionately affected by poorer educational, health and employment outcomes, more likely to be in the children care system and later in the criminal justice system and are likely to have less voice in local democracy.

Many people who have experienced discrimination will have been victims of harassment, victimisation or a hate crime. In the wake of the MeToo movement there has been a greater

spotlight on sexual harassment and its damaging impact. Hate crimes are any offence where the victim perceives themselves to have been targeted on the grounds of their identity. In Cumbria there are over 300 reported hate incidents per year. Over 60% of all hate crimes in Cumbria are racist, reflecting the national trend, but there are a number of disablist, homophobic and transphobic hate crimes.

Domestic abuse has an overwhelming impact on women and girls and the sexist element of the violence and coercion needs to be treated on a par with the racist and homophobic elements in hate crime.

Exploitation in the forms of human trafficking, modern slavery and child sexual exploitation are growing concerns across the country as a whole and Cumbria is not immune to this trend. The agriculture and hospitality sectors are, nationally, key focal points for modern slavery and with these playing such a large part in the Cumbrian economy it would be naïve to think that it could not happen here.

Cumbria faces some key challenges in tackling discrimination and exploitation, including:

- **Sex:** Reducing number of women who are victims of domestic abuse; reducing numbers of women who are given custodial sentences; reducing occupational gender segregation so more women go into male dominated jobs and vice versa; reducing the gender pay gap; greater participation in physical activity compared to males; raising awareness of sexual harassment; support to community level women's groups to have a greater voice in public life, including female political representation.
- **Transgender:** Developing a socially inclusive approach that supports people identifying as transgender in education, employment and community life; working regionally to increase access to NHS services for people seeking medically to undergo gender reassignment.
- **Race:** Successful community integration, reduction in hate crime, effective access to English language support and culturally responsive public services.
- **Disability:** Greater accessibility in terms of transport, buildings, infrastructure and countryside; employers understanding reasonable adjustments; monitoring impact of welfare reforms on disabled claimants; raising awareness of disability hate crime.
- **Sexual orientation:** Helping to develop a vibrant LGB community through Cumbria Pride and other local activities; using the Stonewall national employer champions standard to promote LGB equality at work; support health and social care to consider aging well for people in same sex relationships.

Key Aim

To promote equality and diversity within Cumbria, to reduce people's experiences of discrimination, and to identify and tackle instances of exploitation within the County.

Participation: Building Social Connections

Social capital refers to the connections between people and to the various groups, institutions and social norms that help to create, foster and regulate these connections. This can include informal social networks involving family and friends, voluntary and community organisations and more formal institutions such as workplaces, trade unions, faith groups and governmental organisations. It also includes cultural norms – shared expectations about how society works – that are often unspoken but are critical to whether people trust each other and work well together.

Key aspects of social capital for this public health strategy are as follows:

- **Building stronger communities**
- **Promoting social inclusion**
- **Building safer communities, including tackling crime and antisocial behaviour**

Building stronger communities

Communities with strong informal networks and high levels of trust between individuals are believed to be more resilient and local people have less need to make use of formal support services because neighbours keep an eye out for each other and informal community organisations provide local social activities and services.

Cumbria is often described as having strong communities and this is reflected in the fact that areas of Cumbria frequently feature in national reports of the “best” areas to live in the UK. There are many examples of Cumbria’s communities developing their own activities and services– community transport schemes, sports clubs, library books in community pubs and good neighbour schemes – enabling individuals to connect with other people and access the services they need. Strong communities support a healthy democracy, encouraging people to take an interest in their local area and help to shape public services to meet local need.

However, even the strongest communities sometimes benefit from access to support and advice (for example, on how to access funding for community activities). Equally, areas where levels of social capital are not already high, for example where there is significant turnover of population, need additional support to develop it, often over a number of years.

Community Development staff, local infrastructure organisations and local funders all play an important background role in enabling Cumbria’s communities to organise and flourish. Communities of interest also play an important role in building social capital. People often seek support from people with similar interests (for example, through sports clubs), at a similar life stage (groups for new parents) or similar beliefs (faith groups).

Links between different communities, for example across geographies, age groups or cultural groups, help to develop understanding and build tolerance and community cohesion.

Cumbria’s new Local Industrial Strategy also recognises the role of community as vital to achieving its ambition of creating an inclusive economy. The Strategy builds upon the idea that for people to be healthy and to be successful they need to feel a part of an established and integrated community.

Key Aim

To support communities to thrive, with a strong and diverse informal and third sector, good levels of community participation, and a sense of having control and influence over the factors that matter most to them.

Promoting social inclusion

Where individuals or groups find themselves isolated, whether because of factors such as geographic distance or because of things like language barriers or competing social norms, the impact on health can be significant. Loneliness has been identified as a significant public health issue, with some studies suggesting that the size of the impact could be similar to smoking 15 cigarettes a day.

Social isolation can arise out of major life changes that remove a person's access to their friends, family, communities and colleagues. This can include family breakdown, bereavement, being taken into care (as a child or later in life) or losing a job or becoming homeless. Low levels of geographic mobility in Cumbria can mean that people coming into the area may struggle to make social connections and build a friendship network, while other people who may feel they 'do not fit in' could feel particular effects of exclusion that would not be the case in more urban areas.

Structural changes to the way we live can also feed social isolation. With people more likely to live in single households or dispersed families, as well as greater online forms of interpersonal contact, it is increasingly possible for people to have few friends or people they can rely on in an emergency. This can have implications for emotional health and wellbeing, resilience in the face of adverse events and greater sense of insecurity. Digitalisation also brings other vulnerabilities such as cyber-crime, online harassment and trolling, which can particularly impact on people who are already isolated. On the other hand social media enables connections.

Certain demographic sections of the population are particularly vulnerable to isolation – LGBT people in some rural areas, women above 50 (especially where they are economically inactive, live alone, no longer have children in the household), young males with mental health conditions, care leavers, older people in single person households, BME people who have moved to Cumbria and have limited access to local groups from a similar ethnic heritage, disabled people who experience barriers to access to work, education, transport or social access, people with learning disabilities who are more likely to be single and report loneliness.

Key Aim

To tackle loneliness and social isolation by providing opportunities to help build social connections and engagement particularly for those identified as most vulnerable.

Building safer communities, including tackling crime and antisocial behaviour

Feeling safe is a bedrock of good health, to the extent that the fear of crime has a bigger impact on health than the actual risk of being a victim of crime. How safe we feel at home, at work and in our neighbourhood can influence our social habits. Home (and work) is where we might spend a large amount of time so it is important to feel safe and secure there. Feeling part of the community in which we live is also just as important and can add to our feeling of stability. When we feel safe, we find it easier to relax and do all the things that comfort us. If we are feeling unsafe then we may also feel anxious, depressed or frightened, which can have a direct impact on our health. It can also have

an indirect impact whereby we change our behaviour because we are concerned for our safety. This shows that feeling safe is of paramount importance to our wellbeing and our health.

Cumbria remains one of the safest places to live in England and Wales and feelings of safety are generally high. Cumbria Constabulary is recognised by Her Majesty's Inspector of Constabulary and Fire & Rescue Services (HMICFRS) as a good performing force and for keeping people safe.

However, Cumbria is witnessing an increase in levels of organised crime and the misery this brings on communities through drugs, violence and the exploitation of the vulnerable. In addition, rural isolation presents challenges in identifying vulnerable victims of domestic and sexual abuse. Technology is also changing how the public interacts with the world and each other, changing culture and expectations and criminal use of the internet.

The development of local community based hubs brings together several partner organisations, including the police and District Councils, to combine resources and expertise, to strengthen capacity and build a strong, secure, effective infrastructure to deal with community problems at a local level, increasing public confidence and feelings of safety.

Key Aim

To reduce crime and antisocial behaviour and to ensure that people in Cumbria retain low levels of fear of crime across the whole County.

Place: Improving physical assets

It is important that we develop our physical assets (houses, buildings, transport) in a way that is sustainable, minimising the use of natural resources and maximising the use of human skills and ingenuity. The key assets of place for this strategy are as follows:

- **Promoting healthy town and country planning**
- **Developing a sustainable transport system**
- **Ensuring high quality and safe housing**
- **Access to healthy food**

Promoting healthy town and country planning

The planning system has a very significant impact on the built environment in which people live and work. It can play an important role in facilitating social interaction and creating healthy, inclusive communities. Planning functions are an important lever to shape the natural and built environment, which can contribute to positive health outcomes through green spaces, housing, transport and our high streets and town centres – not forgetting public health protection – air, noise and light pollution. Promoting healthy and safe communities is a requirement of the revised National Planning Policy Framework (NPPF) which further states that planning policies and decisions should aim to achieve “*healthy, inclusive and safe places*”. It is therefore critical that the planning system is active in working towards improving health and wellbeing as a key priority.

In Cumbria, the six District Councils and the National Parks are the main planning authorities, with the County Council being the lead for infrastructure planning, highways, minerals and waste and flood and development management. Partnership working across tiers and organisations is therefore key to influencing and designing healthy infrastructure.

With multiple planning authorities in Cumbria, inevitably there are several different approaches to building health into planning objectives. As part of the World Health Organization Healthy Cities Network, Carlisle has included health as an explicit feature within their adopted local plan via a strategic policy on ‘Healthy and thriving communities’. Other Districts have adopted specific policies with positive health benefits via environmental or housing policy. The opportunity exists to take a joint approach to maximising the health benefits of the planning system.

Key Aim

To ensure that planning authorities across Cumbria develop and implement policy in support of this strategy, including focusing on active transport, green space, quality housing, availability of healthy food, carbon reduction and creation of employment opportunities.

Developing a sustainable travel and transport system

The transport system is critical to enabling people to access goods and services that are important for health and wellbeing, to encouraging physical activity through promoting regular walking or cycling and to tackling climate change and improving air quality.

Cumbria is a large rural county with many settlements that are not large enough to sustain a wide variety of services. Many people therefore have to travel significant distances to access services. For those with a car this may not prove too problematic. At the time of the 2011 Census, 21.4% of

households in Cumbria did not have access to a car, a lower rate than the average for England (25.8%). However those without access to a car (particularly the young, the old and those who cannot afford one) and who therefore rely on public transport, can face significant challenges.

The Local Industrial Strategy highlights the impacts of Cumbria's aging public transport which is insufficient to meet the population's needs. Poor rail connections, particularly from coastal towns and a reduction in bus services, particularly in rural areas can lead to social isolation and worklessness.

Communities risk isolation if they do not have passenger transport that is:

Available: the passenger transport network should be within easy reach of where people live and take them to and from the places they want to go at times and frequencies that correspond to patterns of social and working life. People also need to be kept informed of the services that are available;

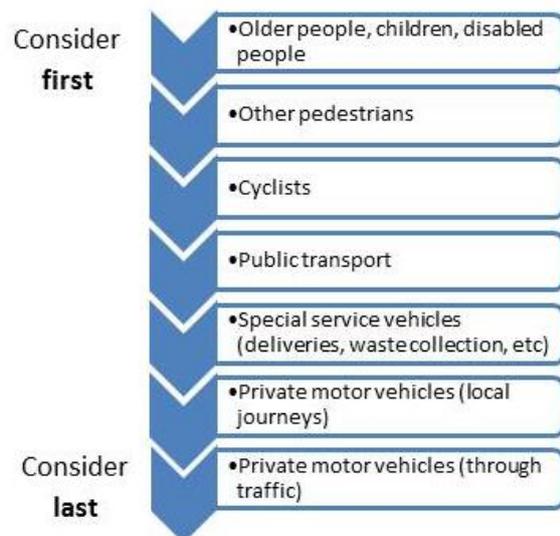

Accessible: vehicles, stops and interchanges (and the walking routes to and from these) must be designed in such a way that, as far as possible, anyone can use them without difficulty;

Affordable: people should not be 'priced out' of using passenger transport because of high fares and should be able to easily find the right ticket for them;

Acceptable: people should feel that passenger transport is something that is equipped to meet their needs as well as comfortable, safe and convenient.

The physical transport infrastructure in Cumbria (in common with the rest of the country) remains very focused on cars, at the expense of more active forms of transport such as walking and cycling.

To promote health and a more sustainable environment, the well-known road user hierarchy (right) needs to move from rhetoric to reality. In addition, there is a need to encourage a greater uptake of new electric and other alternative fuel vehicles in order to reduce transport emissions, improving air quality and helping to tackle climate change.

Key Aim

To develop the physical transport infrastructure to make it low carbon and more active, including making Cumbria a great place to walk, cycle, and use electric vehicles, and to ensure that the public transport system in Cumbria provides a viable alternative to car ownership, particularly for the most rural communities.

Ensuring high quality and safe housing

In Cumbria the median house price is just under £145,000, well below the national average of £186,000. However, in certain parts of the County, such as the Lake District, prices far exceed the national average and affordability is a major problem – house prices can be more than ten times local incomes. However, the County also contains large areas (mainly urban) of deprivation. In response

there has been significant activity around housing to ensure that all people have access to affordable, safe and modern standard of housing which supports a healthy lifestyle. The local industrial strategy reports that in all six districts house building is above Cumbria's required level.

The Cumbria Housing Group has identified three priorities for improved housing across Cumbria:

Priority 1 - Housing Growth, Affordability and Community Sustainability. Housing is a cornerstone of Cumbria's economic ambitions. Investment and growth will bring many more people into the County and this means that affordable housing, including in the social rental sector, is needed for employees and to enable young people to take up jobs locally. It also means that high quality market housing is needed to attract skilled people to come and work in Cumbria, generating wealth and spending to sustain and develop our local services and town centres.

Priority 2 - Housing Regeneration: Regenerating our poorest housing and town centres will improve the quality of housing and increase choice and demand in these areas. We want to bring empty homes back into beneficial use, improve the energy efficiency of homes and improve standards in the private rental market. We also want mechanisms established to ensure that second homes/holiday homes do not dominate local housing markets to help sustain our communities, particularly in rural areas.

Priority 3 - Supporting Independent Living. Poor quality neighbourhoods and housing conditions and at its extreme, homelessness, can contribute to a range of health conditions. These all have a long-term impact on particularly vulnerable people, with consequential impacts for acute hospital services, adult social care and children and young people's life chances and employment prospects because of the effect on learning and education. It is therefore crucial to deliver better-designed housing that can be easily adapted to meet the life changes of occupiers to enable them to live independently.

Key Aim

To improve the housing stock across Cumbria, ensuring that everyone has access to safe, warm, affordable housing, and that new housing supports wider aims including carbon reduction, climate change resilience, energy security, and adaptability.

Access to healthy food

The food system is a vast and complex global infrastructure and the choices that people make are heavily influenced by availability, price, advertising and many other factors besides taste preference. One in four children starting school in Cumbria are not a healthy weight. However, more children from deprived areas are overweight or obese and the differences between low income and high income areas is growing every year.

Dietary habits are changing across Cumbria, mirroring national and global trends. Many households have two working parents and due to time pressure, stress, lack of control over working times and greater availability and affordability of fast food, children are eating less home cooked food. Meals eaten outside the home tend to be associated with higher intake of sugar, salt, fat and salt and portion size tends to be bigger.

Ensuring good access to healthy food, healthy food production locally, supported by a range of community food activities is vital in creating healthy places. Several parts of Cumbria are advancing

work around the food agenda through healthy options awards, allotments and community food projects.

Exposure to marketing of high fat, high sugar processed food influences children's preferences and eating habits. Children who engage with food brands online are more likely to consume unhealthy food. Children and young people that have more screen time, are more likely to be exposed to food advertising through you tube adds, vlogs and online games.

Key Aim

To promote a vibrant and diverse food economy, with local communities having access to a range of healthy and affordable food options, and to reduce waste and the ecological footprint of the local food system.

Prosperity: Fair and inclusive growth of our financial assets

Financial growth and the distribution of financial assets is most commonly considered and pursued as a goal of social and economic policy. There is a strong association between wealth and health, with more affluent people experiencing greater control over their life, greater life opportunities, less exposure to health damaging environments and greater healthy life expectancy. Societies with a large difference in wealth between communities have poorer health overall. Therefore reducing wealth inequalities improves the health of all members of society. For the purposes of this public health strategy, the key aspects of financial capital are as follows:

- **Reducing income inequalities**
- **Promoting sustainable economic development**

Reducing income inequalities

Because wealth and health are so inexorably linked, tackling health inequalities is dependent on reducing income inequalities. For Cumbria, the focus is on lifting incomes at the bottom of the income scale – ‘levelling up’ – rather than by redistribution from the most affluent, which is mostly outside the powers of Cumbrian agencies.

Results can be achieved through a two-pronged approach. The first is to alleviate short term issues causing poverty and the second is to focus on the longer term issues that restrict life chances.

Some of challenges around alleviation are linked to low income households. These include changes to benefits, stagnant wages, a culture of low aspiration and a lack of joined up advice services which are easily accessible. There are also challenges around consumer culture and society’s need for new and more expensive, fashionable products that put more pressure on incomes. In rural areas, there are additional costs relating to transportation and fuel poverty, which eat into household budgets. It is therefore important that public services working with people on low incomes offer advice and support on financial management.

In the longer term, it is crucial that the education, skills and employment agenda is focused on supporting people from low income households. This includes provision of high quality child care in areas of multiple deprivation, reducing the disadvantage gap for pre-school and at key stages up to GCSE, increasing the number of people from low income backgrounds into further and higher education and increasing opportunities for people from low income backgrounds to benefit from the wide range of training available.

The role of the skills system is also vital in addressing the skills gap for people of working age and in terms of providing opportunities for older people who wish to stay economically active.

Key Aim

To reduce levels of poverty and income insecurity through support to vulnerable groups and a focus on supporting people into high quality employment.

Promoting sustainable economic development

When it has the right focus, economic development can be the key to unlocking several of the other themes of this strategy and can bring significant public health improvements. Good economic

development will focus on benefiting existing residents, particularly those with low quality and/or low paid jobs, through creation of jobs matched to local skills and through up-skilling local residents to take on the available jobs. Economic development that seeks mainly to attract existing affluent populations to move into the County may boost economic statistics, but it will do so alongside widening inequalities within the County.

In Cumbria, the main focus for sustainable economic development is the Local Industrial Strategy. This is built on two key platforms:

- Inclusive Growth: Prosperity for All
- Productivity: Improving all sectors and reducing West/East disparities.

However, Cumbria faces a number of challenges in achieving these goals. Productivity in Cumbria is below average across most sectors. As described in the chapter on skills, we have a small pool of residents with graduate level qualifications and a high proportion of people with no qualifications. Crucially, we have a declining working age population, with a net outward migration of 18-24 year olds.

Our five foundations align to our vision for a transformed economy

Key Aim

To ensure that economic development supports health and wellbeing and tackles inequalities by focusing opportunities on the most disadvantaged parts of Cumbria.

Key Measures of Progress

Appendix 1: The Five Capitals Model

This strategy is built around the “five capitals” model proposed by Forum for the Future as a framework for sustainable systems. Broadly speaking this starts from a recognition that society is a sub-system of the broader ecosystem, and that the economy is a sub-system of society. At each of these levels there are different assets, collectively referred to as “capital”, that can be exploited and/or developed.

Natural capital, sometimes also referred to as environmental or ecological capital, is made up of all those natural resources and processes that people depend on. This includes obvious natural resources such as land, water, air, timber, and animals, but also natural processes such as the water cycle and climate regulation, sometimes referred to as “ecosystem services”. Natural capital is the basis of all other capitals. It can be utilised to support the development of other capitals – for example building things essentially turns natural capital into manufactured capital and financial capital – but it has to be utilised sustainably in order to ensure that people can have a good quality of life today, and to avoid damaging the prospects of future generations.

Most obviously, **human capital** encompasses people’s skills, knowledge and experience, the things they draw on every day in living and contributing to society. Less obviously it also includes people’s motivations, their capacity for things like empathy, passion and joy, and also their intellectual output such as art and other cultural expressions.

Social capital refers to the connections between people, and to the various groups, institutions and social norms that help to create, foster and regulate these connections. This can include informal social networks involving family and friends, voluntary and community organisations, and more formal institutions such as workplaces, trade unions, faith groups and governmental organisations. It also includes cultural norms – shared expectations about how society works – that are often unspoken but are critical to whether people trust each other and work well together.

The concept of **manufactured capital** is a broad one, encompassing for the purposes of this strategy any material goods or infrastructure that have an impact on people's quality of life. Because of both its reliance and its impact on natural capital, it is critical that growing and improving manufactured capital is done in a way that is sustainable, minimising the use of natural resources and maximising the use of human skills and ingenuity.

Financial capital is essentially the amount of money available within the local economy, and is the form of capital most commonly considered and pursued as a goal of social and economic policy. At one level it is clearly critical for public health: within the normal range of experience, more affluent people are generally also more healthy, across almost all measures of health. However at a broader level financial capital has no intrinsic value: it plays an important role in enabling other forms of capital to be owned and traded, but it is only representative of these other forms of capital. Because of this, financial capital cannot grow sustainably without growth in the other forms of capital as well.

Interpreted for the purposes of a public health strategy, this model suggests that a community is healthy and sustainable when there is an appropriate stock of all five capitals. A key feature of this model is that it emphasises the importance of building all five capitals without degrading any of them. It sets a positive vision of building a better society in which everyone is able to maximise their potential for health and wellbeing.
